Guide to using

RADOS RDS-120 - Ionising Radiation Meter

The Rados RDS-120 is a general use handled meter that can be used for measuring ionising radiation around the home. The meter measures gamma radiation in dose rate units of microSieverts per hour (μ Sv/h) and radiation dose in units of microSieverts (μ Sv).

For more information please see **Radiation Basics** (www.arpansa.gov.au/radiationprotection/Basics/index.cfm).

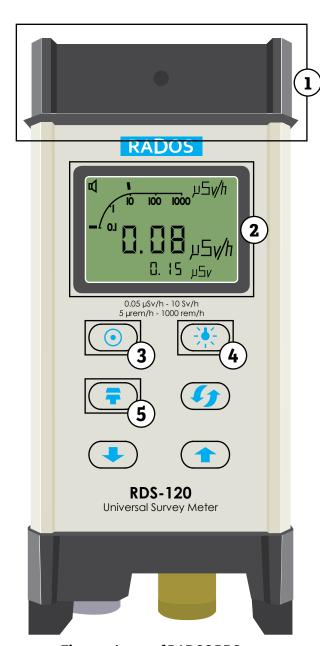

Figure 1: image of RADOS RDS-120

Key

- 1. Detection centre
- 2. Display window
- 3. Power button
- 4. Display illumination
- 5. Audible button

Instructions

- Turn on unit by pressing and holding the power button for one second.
- 2. Allow five minutes for RDS-120 to take a background measurement. Do this by holding the detector, or placing it in a location which you do not wish to measure e.g. placing it on a bed. Note down the dose rate displayed.
- 3. When you have determined an area you wish to measure, place RDS-120 in that location for five minutes to take a measurement (see figures 3 and 4 as examples). Note down the dose rate displayed.
- 4. Repeat step 3 for as many locations as you wish to measure.
- 5. Turn off unit once finished by pressing power button for one second.

Guide to using RADOS RDS-120 - Ionising Radiation Meter

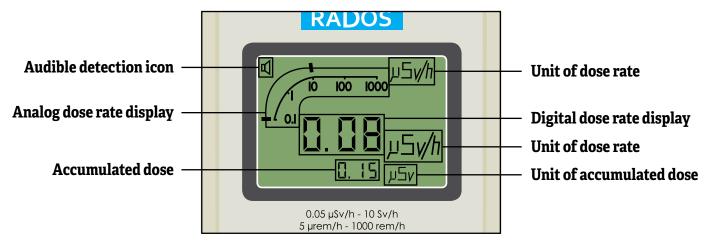

Figure 2: zoomed-in image of the display window

Measurement source	Typical gamma dose rate (μSv/h)
Natural background in Australia	0.05-0.4
Granite bench top (on contact)	0.1-0.3
House bricks (on contact)	0.1-0.3
Flying at 36 000 ft	2.0-5.0
Springs of Paralana, Arkaroola, Australia	1.0-5.0
Some locations in Guarapari Beach, Brazil	10.0–20.0
Radiation source (30 cm from 1MBq Cs-137)	1.0

Should you wish to obtain advice on the measurements you have taken, please contact the ARPANSA *Talk to a scientist* team:

Phone: 1800 022 333

Email: info@arpansa.gov.au

- If the dose rate measured is between 1.0–10.0 μ Sv/h, please inform ARPANSA at your earliest convenience or on return of device.
- The dose rate alarm is set to 10.0 µSv/h. If this alarm is triggered, please contact ARPANSA immediately.
- The accumulated dose alarm is set to 100.0 μSv. If this alarm is triggered, please contact ARPANSA.

For more information please see **Radiation Basics** (www.arpansa.gov.au/radiationprotection/Basics/index.cfm).
